CAREER OBJECTIVE

Software Engineer with experience developing enterprise manufacturing systems and AI-powered information retrieval solutions. Skilled in .NET, Python, RESTful APIs, SQL optimization, and Generative AI technologies including LLMs, LangChain, RAG, vector databases, and semantic search. Seeking an AI Software Engineer role to build intelligent enterprise applications, AI agents, and workflow automation solutions for real-world business environments.

WORK EXPERIENCE

Kim Bao Son Vietnam International Co., Ltd. – Software Engineer **May 2025 - Present**

- Develop, maintain, and enhance enterprise software solutions supporting manufacturing operations, including Project Management, Manufacturing Execution, Warehouse Management, and Total Productive Maintenance systems.
- Serve as the primary developer responsible for the Project Management System (PMS), implementing new features, resolving production issues, optimizing performance, and providing long-term system maintenance.
- Designed and developed a .NET desktop application to simplify remote support and factory PC management using TightVNC.
- Participated in modernizing the Warehouse Management System by developing a React web application and a Flutter mobile application with RFID scanner integration.
- Research, design, and develop the TPM system from scratch using React, Flutter, and Python, collaborating with users to define business workflows and technical solutions.
- Develop REST APIs, implement business logic, optimize SQL queries, and provide troubleshooting and technical support for production systems.

PROJECTS

UEL Generative AI Retrieval System (Graduation Thesis & Published Research)

- **Description:** Designed and developed an enterprise-scale AI-powered information retrieval platform for university documents, combining semantic search and Large Language Models (LLMs) to provide accurate, context-aware answers from internal knowledge sources.
- **Responsibility:** Developed an AI-powered document retrieval system using RAG, LangChain, OpenAI GPT, and Pinecone. Implemented document ingestion pipelines with PDF parsing, chunking, embeddings, and semantic search. Built REST APIs with Django and an Angular-based conversational AI interface. Improved answer accuracy through prompt engineering and retrieval optimization.

VNC Helper Desktop Application

- Developed a .NET desktop tool to support remote monitoring and troubleshooting of factory computers. [View source code](#)

CETIFICATE

English

TOEIC Certificate – English proficiency certificate

- [Reading & Listening: 765/990](#) | [Speaking & Writing: 300/400](#)

EDUCATION

Bachelor's degree - University of Economics and Law, VNU-HCM **Sep 2021 - Nov 2025**

- Faculty of Information Systems Major in building and developing E-commerce Applications.
- GPA: 8.43/10 | ERP - Enterprise Information System: 9.0 | [View transcript](#)
